### THE PANTHER X6

OPTICALLY PERFECT 6 BASE MASK IN BOTH  
AN ADJUSTABLE NOSE AND FIXED NOSE

The Panther System was born in 2002 under a design directive presented to Pilla by current 23 Time World Champion George Digweed. George required a frame system that provided a shooter an experience that felt like they were not wearing shooting glasses. The Panther system revolutionized the shooting industry and is worn by more Champions around the world than any other. Panther products number into the hundreds of thousands world wide making it one of the most widely adopted competitive shooting systems.

The NEW ZEISS X6 system, our 6<sup>th</sup> generation Panther frame geometry, harnesses a Rubber Co-Injection technology to provide superior adjustment in both X6 & X7 models. The X6 model uses the Pilla patented “Fork” temple balancing system.

PANTHER X7 VIVX 2 LENS OPTIONS

LENSES BY

The new generation Panther X6 Post has raised the level of comfort from the first generation and now in its 6th generation incorporates our unique counter balancing temple geometry to reduce all felt weight on the bridge of the nose. Even with the larger lens size the felt weight of the frame is almost completely removed from the bridge.

The temples are fully adjustable from front to back but also can be shaped to sculpt a shooters head.

The temples can be manually adjusted by forming the temple tips to contour the shooters head. The better the form fit to the head, the better the counter balance in weight distribution works.

FULLY ADJUSTABLE TEMPLES

Temples can be extended 5 positions for a customized fit. Additionally, the fork temple geometry can easily be bent to the contour of the archers head. This design reduces the majority of the weight on the bridge of the shield sitting on the nose.

## THE PANTHER POST RX INSERT:

The X6 & X7 POST SYSTEMS utilizes a prescriptive insert to provide correction for shooters. The Panther X6 design is capable of delivering a wide range of power requirements. The Panther X7 design it is recommended for a power range of + or - 2.5. If a strong correction is needed we recommend selecting the Panther X6

PANTHER KIT OPTIONS - AVAILABLE IN ALL PANTHER MODELS

TRUCK KIT  
TRU COLOR KIT  
26ED • 44ED • 76HC

A true balance of visual spectrum color enhancement. This kit provides a shooter a full sun to low light lens option. Perfect for both clays and hunting.

BANK KIT  
BACKGROUND NEUTRALIZER KIT  
22N • 44N • 66N

A specialty kit providing a full sun, medium, and low light background neutralizer technology. This kit is perfect for the shooter looking to manage against foliage.

BOOST KIT  
NEUTRALIZER AND ENHANCER  
22N • 45MAX • 60HCP

This kit is tuned to provide the shooter with the maximum boost in pink and orange targets. A full sun, medium, and low light lens is included with a direct focus on spiking these colors of targets.

NEW 60HIGH CONTRAST  
PERSIMON  
Juice Target Orange in Low Light.

SPORTSMAN KIT  
HIGH LIGHT - LOW LIGHT  
10ED • 45MAX • 94HC

This kit offers the widest light management tool for the shooter. This is a perfect mixed kit for a shooter that both hunts and shoots clays. Included in this kit is the new 45max; a fantastic all around color enhancer for clays and works extremely well on small game.

3D KIT  
DIMENSIONAL TARGET KIT  
26ED • 50RHC • 66N

The lenses in this kit are extremely balanced in enhancing the color spectrum and boosting registration of orange and pink targets while even pushing rich definition in black targets. This kit provides crisp detailed definition without saturating color.

## THE OUTLAW X SYSTEM - GEN2

A WIDE VISUAL SIGHT PICTURE

LENSES BY

No other shooting glass technology provides more sight picture than the Outlaw X Series. The visual field is completely unobstructed as there is no front frame.

### OUTLAW X SYSTEM

The Outlaw X is powered by ZEISS VIVX lenses and is certified to be a perfect optical instrument. The front bar has been taken out of the frame so the visual site picture is unmatched. The shooter is presented with an unobstructed view without any imperfection or visual disruption. The temple design allows for extremely quick changing of the lens technology to maximize the performance of the product in any lighting condition.

### OUTLAW X - NOSE

The nose bridge is made of soft silicone rubber and can be customized to fit any shape nose by expanding the width of the nose assembly.

LENSES BY

The Outlaw X systems incorporate our unique counter balancing temple geometry to reduce all felt weight on the bridge of the nose. The temple arms are intentionally designed to wrap the head. We have increase the length by 6mm to create this geometry.

The temples can be manually adjusted by forming the temple tips to contour the shooters head. The better the form fit to the head, the better the counter balance in weight distribution works.

### QUICK LENS CHANGE

Our patented Snap-tech technology has been engineered to provide a solid fulcrum for easy changing of our temple arms to maximize your visual performance with the optimal light transmission. The wide temple creates a flat surface for easy leverage to snap the temple in place and remove.

## 500 SERIES OVERVIEW

The 500 Series is a entry level performance piece of equipment for the shooting enthusiast. This exciting new platform molded from high grade stainless steel benefits from years of frame design experience. The frame provides a completely unobstructed sight picture and a perfectly balanced frame geometry that reduces perceived weight. At 1.25 oz, the frame provides a feather weight design for all day comfort. This feather weight design provides all day comfort. The 500 Series integrates the Pilla signature “fork” temple tip made of a high performance rubber called Megol. The “fork” tip is easily adjusted by bending the tips to contour the shooters head. When properly adjusted the weight of the nose bridge is almost completely erased. The nose assembly of the 500 Series borrows from the minimalistic approach of the Pilla VIVX collection. The tiny nose is not seen

## SHADOW BOX ANCHORS

The lens is edged to create a slot that is placed into the frame at the nose and then the temple. The entire frame assembly acts like a big spring to hold the lens. The 580 and 540 lenses change extremely easy with minimal pressure. This new system allows for quick changing of the 580 and 540 lenses to maximize the full compliment of the 8 new colortrast filtrations.

560 MASK FRAME

## INVERTED SNAP TECH

The 560 uses the same patented snap tech technology from our Panther X platform but attaches to the inside of the front bar.
